Anti-ligature Grab Rail

ALGR

Ligature Resistant Grab Bar

Dimensions	Materials	Certification
varies"x6 1/4x3 3/4	Solid Surface	UK DDA Compliant

Material & Construction

The washroom grab rail is a handrail section with a closed and open end cap. It is suitable for use either as a vertical rail beside a mirror or on the wall behind the pan or at 15° beside the pan or on the back of the door.

Finished in high polish and supplied with security screws.

The grab rail is available with a left hand or right hand opening. Lengths are 24", 30", 36", 40", or 48".

Standard Equipment

Grab rail in solid surface material.

Installation

• Place the grab rail on the wall and mark out the screw holes.

• Drill holes for the screw holes and insert plugs.

• Secure the grab rail in place using the security screws provided.

Operation

To grip the grab bar correctly, the fingers should curl round the grab rail with the thumb supporting from the outside.

Maintenance

Designed to be maintenance-free.

Cleaning

Cleaning should only be done with a damp cloth, and mild cleaning detergents should be avoided.

Load Resistance

Our range of grab bars has been designed to comply with and surpass the ADAAG requirements as set out in ICC/ANSI A117.1-2003 and CFR 28 part 36, Federal Register Volume 56 No. 144, 26 July 1991. These state that the manufactured product shall be of adequate strength to support a load of 250 pounds (113.4kg).

In order to comply with this standard and withstand the shear, tension, pullout, and torsion loads generated by the maximum, it must be used when installing the product, and the wall itself has to be able to sustain such weight.

WARNING: Cancer and Reproductive Harm
